## Introduction

To design a web-based HSBC internal desk booking system for 1600 desk locations. It will allow approximately 2000 staff members to reserve a desk location and resources for up to 5 days. The system handles concurrent usage of up to 30 users and maintains approximately 3000 active bookings.

## Environments

### Programming environment

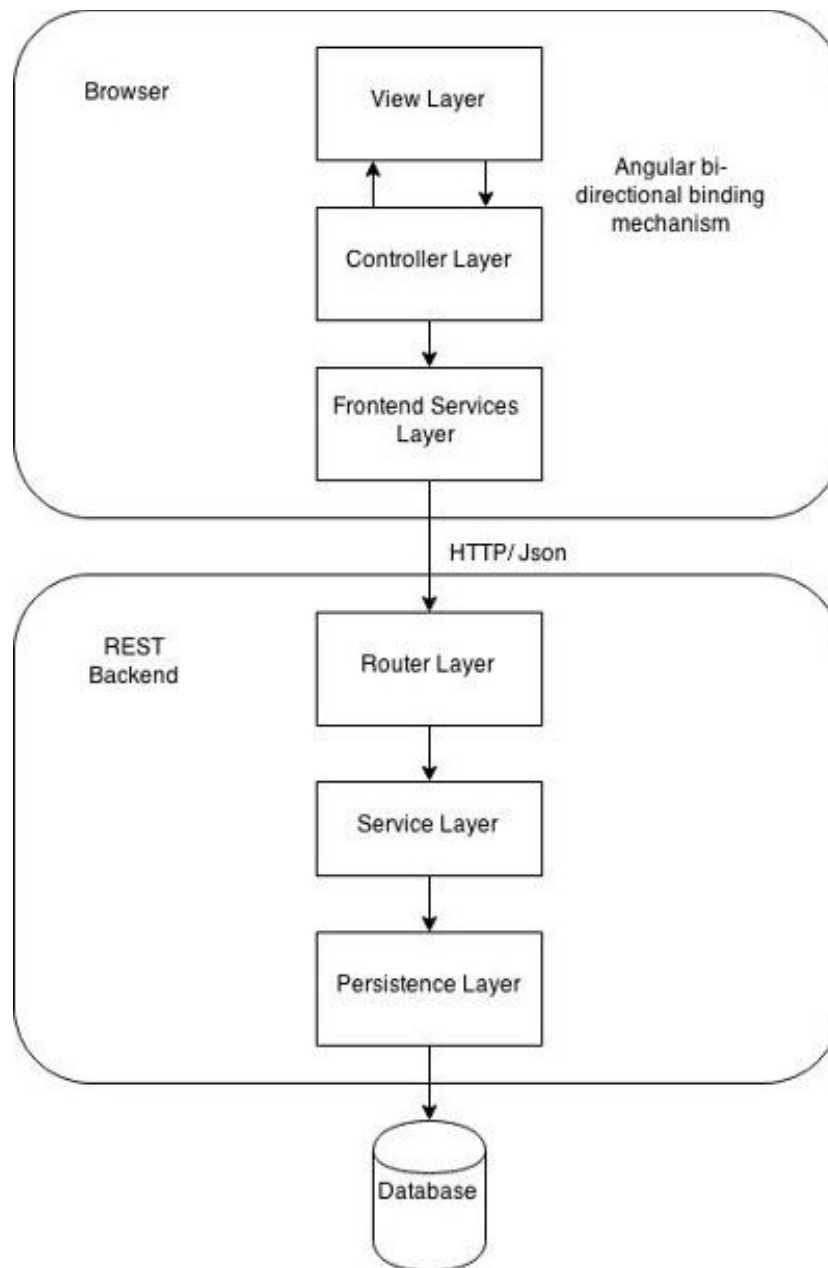

- Netbeans IDE 8.2 (Java EE 7 Web Version)
- Spring MVC 4.0.1 (Java backend framework)
- AngularJS 1.6.1 (Javascript frontend framework)
- PureCSS 0.6.2 (CSS library)
- MySQL 5.7.17 Community Server (database)
- MySQL WorkBench 6.3 (Visual tool for MySQL database management)
- Github (private repository)
- Lucidchart (online UML diagram tool)
- Apache Tomcat 9.0.0
- Languages: HTML, CSS, Javascript, Java, MySQL

### Production and Test environments

- Google Chrome (version 56.0.2924.87) for Mac users
- Internet Explorer (version 11.576.14393.0) for Windows users
- All production and final test environments will be on the 3 Windows laptops we have, running locally using Internet Explorer, Apache Tomcat and MySQL.
- Backend testing: JUnit 4.12
- Frontend testing: Jasmine 1.3

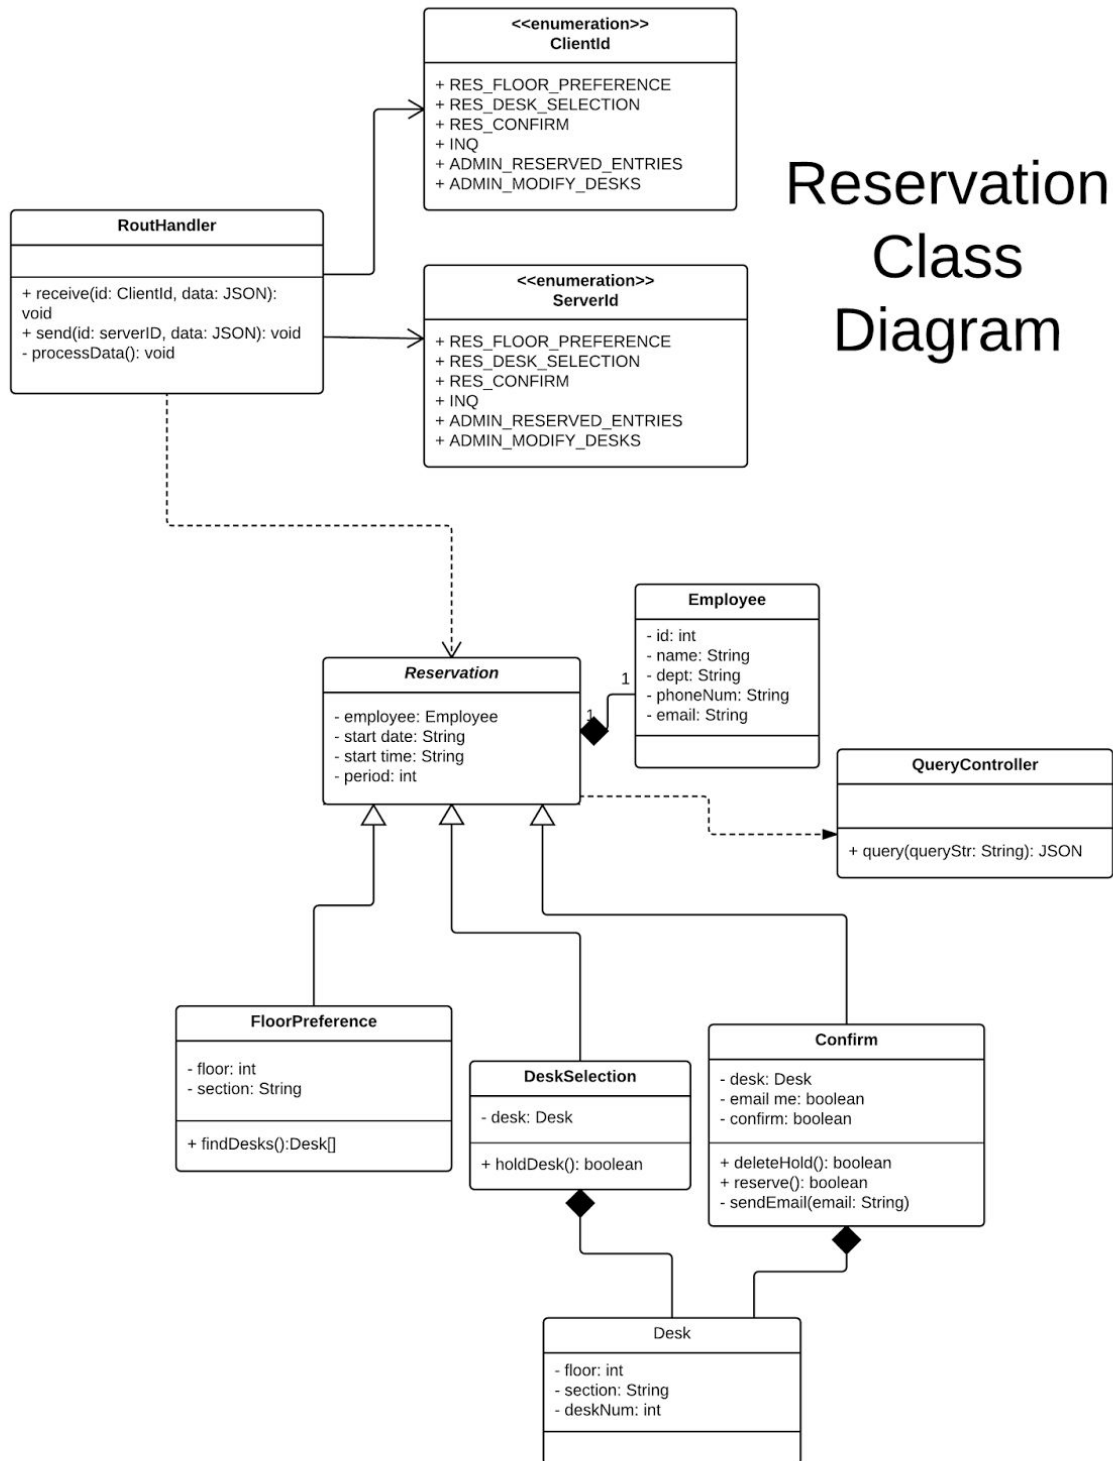

## Software architecture

### System Architecture<sup>1</sup>

## Data design

Database Framework:

- MySQL 5.7.17 Community Server (database)
- MySQL WorkBench 6.3 (Visual tool for MySQL database management)
- normalized specifications

Normalization: Second Normal Form

Desk Table

number	location	floor	section	status
1.A.118	Broadway	1	A	good
1.B.110	Broadway	1	B	good
2.B.203	Broadway	2	B	broken

Desk Reservation Table

rid	empid	desk_number	created_datetime	start_datetime	end_datetime
001	11112222	1.A.118	2017-02-01 11:40:22	2017-02-05 08:00:00	2017-02-06 15:00:00
002	12345678	1.B.110	2017-01-15 16:23:44	2017-03-15 12:00:00	2017-03-17 16:00:00

Fake User Table

empid	name	extphone	country	jobrole	photourl	extemail	location	intphone	postal address
11112222	ELLIE LIU	11778 1234567	Canada	Software Developer	11112222.jpg	ELLIE LIU/HBCA/HSBC	383GIL	778	1234 Bread Road
12345678	COLLEEN VUONG	11604123 4567	Canada	Software Developer	12345678.jpg	COLLEEN VUONG/HSBC/HSBC	262GIL	604	4321 Butter Avenue

Located\_In Table

desk_number	location_name
1.A.118	Broadway
1.B.110	Broadway

Location Table

name	Address
Broadway	2910 Virtual Way, Vancouver BC, V5M 0B2

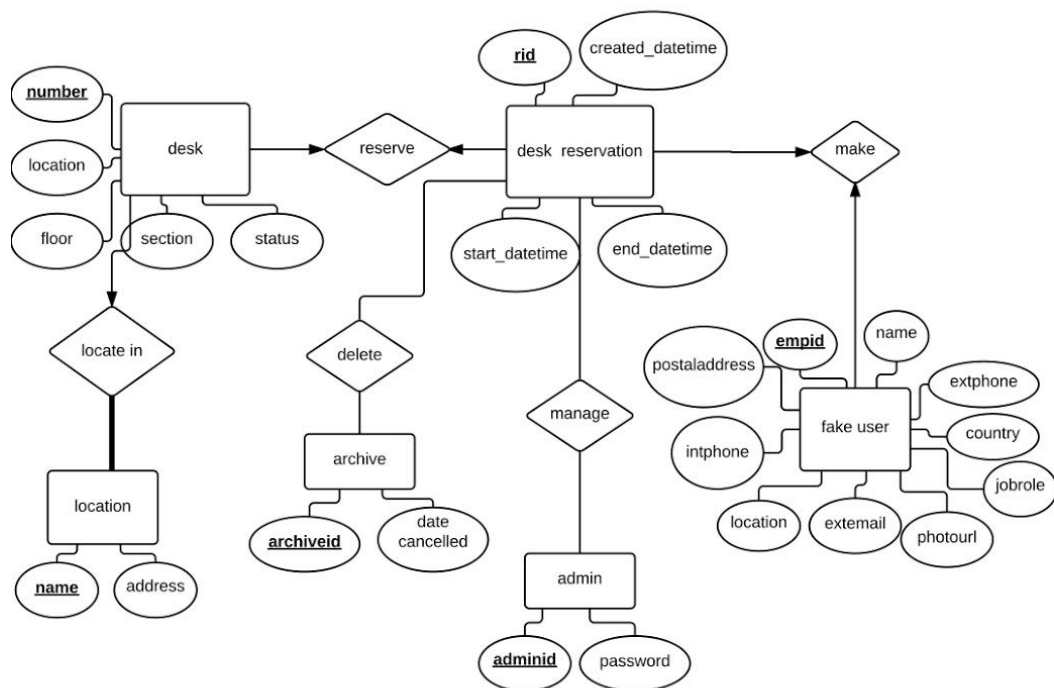

Admin Table

adminid	Password
ADMIN001	12345
11112222	54321

Archive Table

archiveid	Data cancelled
003	2017-02-06 15:30:30

## API design

HSBC API will be used to retrieve staff information. Within the HTML header section, we just need to add this line to use HSBC API:

<http://ssupdate.global.hsbc/myhsbc/uservariables.ashx>

This will return a JSON key value pair with this info:

```
var staffDetails_name='JOHN DOE';
var staffDetails_empid='43868488';
var staffDetails_extphone='1 1 778 8743386';var staffDetails_country='CANADA';
var staffDetails_jobrole='HEAD OF WEALTH IT CANADA';
var staffDetails_dept='SWD WEALTH MANAGEMENT IT GENER';
var staffDetails_photourl='photos.global.hsbc/casual/square/4316/43868488.jpg';
var staffDetails_extemail='JOHN DOE/HBCA/HSBC';
var staffDetails_employeeType='E';
var staffDetails_location='3383GIL';
Var staffDetails_intphone='778';
var staffDetails_postaladdress='3383 Gilmore Way, Burnaby, B.C. V5G 4S1';
var errormessage=";
```

The values in brackets are the employee specific information as follows:

```
var staffDetails_name: Name of the employee
var staffDetails_empid: Employee ID, 8 digit format
var staffDetails_extphone: Employee phone number
Var staffDetails_country: Country where employee is based
var staffDetails_jobrole: Job role/position of the employee
var staffDetails_photourl: URL of employee's picture
var staffDetails_extemail: Internal email address
var staffDetails_location: Employee office location
var staffDetails_intphone: Phone location prefix
var staffDetails_postaladdress: Full office address
```

## Algorithms

No complex algorithms used for this application.

## Design trade-off

- UI/UX will be simplistic due to time constraints
- Performance may not be ideal given time constraints on testing and production environment being our own laptops
- need to make certain design decisions based on time, quality, performance, security or scope considerations).
- 10 minutes time range for confirmation page
- Immediately receiving confirmation e-mail

## Notable risks

- Graphic display may only be able to display lower resolution PDF and JPG files less than 512MB in size.
- There is a need for an administration module to prevent all administrators forget their passwords.
- The risk of booking the tables that are unavailable (e.g. broken, missing a chair or being moved with current location).
- What if two people simultaneously book one table and will booking procedure still correctly execute?
- Will performance able to handle if it exceed the maximum capacity of live active bookings in the system?
- Can't simulate actual performance using HSBC's servers; all production code will be run on our local servers.
